Abstract

A good abstract should answer the following few questions. Question-1 what is the general topic of the article, Question- 2 what is the speci

c topic, Question-3 what is the research problem, Question-4 what is the current status of the prob- lem and

nally Question-5 what is the contribution(s) of the article and/or work.

1 INTRODUCTION

This section is used to give little background and moti- vation why to write this paper/article. More speci

cally a detail answer of the questions from the abstract section.

2 METHODOLOGY

To provide a framework/taxonomy to de

ne the scope and methodology, technical notations that you are going to use.

3 MAIN BODY

To list, describe and compare the leading work in the ar- eas using the uniform survey method/style that your have de

ned in the above section. This section may contain some de

nition like as follows:

3.1 Part-1

The numbers of sections and subsections are subject to your topic. This section may contain some equations like follows:

$$P\left(t\right) = P\left(\hat{q_1}\right) \times \left(\hat{q_2}\right) \cdots \times P\left(\hat{q_m}\right) \times P\left(s\right) = \left(\prod_{i=1}^{m} P\left(\hat{q_i}\right)\right) \times P\left(s\right) \qquad (1)$$

Table 1: **Common notation used here**

Notation	Description
Ω	large population
D_1, D_1, D_2	the original data sets
S^o	the set of d different sensitive values

Roll	Number	Position
1	2	3
4	5	6
7	8	9

3.2   Part-2

In end of each section and end of this paper, it is always a good ideas to summarize your work by listing the technolo- gies/methods that you have discussed and compare them using a table or

gure.

3.2.1   Table

Draw a table as follows:
